It also means, like it is in reality, everyone can do something with less effort, sometimes grow a single plant.

The intensive activity of agriculture and farming were characterized by Italy's societies as a massive and primary type of work. From 1861 there was a low decrescent effect of deforestation. So it was needed to fire the forest, to get also a fertile land.
Others human factor were related to the infrastructure construction such as metropolitan ways, suburban transport, ferrovial traffic and high-velocity road that

were spreaded in all the nation.

So we can indicate the process of forestation like a transformation of boschive land to human utility purpose's one.
The growth of deforestation is also correlated to the increment in population, because of food, electricity and pollution with the termo-systems that combust wood.
Another factor of deforestation is the spread out at large scale industries such as iron-fusion, metal treatment and other types of industries.
So as we can see that the cause of deforestation has a centered human factor. This mean that is the human to decide to deforest. Without the phenomenon of deforestation many countries shouldn't have their growth rate.

Other aspect that is related to the deforestation is the maintaining and use of the big data center that all the big player of

tech have to use to compute the high demand of data and put these computation, by the entities of the data center, put together, filtered, mapped, treat like a data, and also human non distinguish such time because the AI has a role of oracle, that is not only a entity, but is a chatbot belonging to some server to substituting the human task, in a automated task, but consumes a lot of resource because the architecture receive a lots of transation and there are the real time boundary to respect. The massive production of oil's seed and soia, which are trees characterized by a short life cycle, with a high increment of reuse of the land and to produce a lot of that food. As we can see, there is a high production of these food, that is a low quality food but can deal up to the needed of food in the world. We have to remember that the modern society is living in a context of globalization. These status is correlated with the Society of Mass. But is still other, involve their

culture and the shape that must have the contemporain the society. An example is the vertical garden in Milan, it is a sort of subliminal message such as “ For this construction we have kicked off a lot of forest , but we don’t forget the origin of the land.
